

Technical Data Sheet

Product: DT084

THE EDGE
ON SAFETY

DESCRIPTION

The DT084 trim is designed to provide a neat transition between 2mm-3mm vinyl and cushion back carpet or other 8mm floor coverings such as ceramic tiles or carpet tiles. This eliminates the need and expense of providing a matrix for the floor to be raised from vinyl height to carpet height.

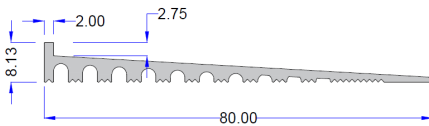

MATERIAL

T6 6063 Alloy aluminium – Mill Finish.

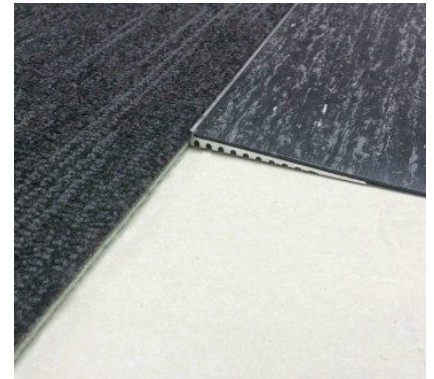

Standard 2.5 Meter Lengths

DIMENSIONS

EXAMPLE

For this installation, DT084 has been installed with carpet and vinyl. The ramped profile allows for a smooth transition between flooring and removes the potential trip hazard.

Release: January 2019

Information given in this data sheet is based on the current state of knowledge. This does not exempt the purchaser from carrying out his own careful inspections of incoming goods and their suitability for local building codes. We reserve the right to make changes to the product data in the course of technical progress or due to operationally related further development. Owing to factors beyond our control during application, recommendations given in this data sheet require tests and experiments by the customer. Our recommendations do not exempt the customer from the obligation to check any infringements of third-party rights himself and eliminate them if necessary. The suggestions for product use are not equivalent to a warranty of its suitability for the recommended purpose.

Each new release of this data sheet supersedes the previous one.
